of bands as part of any political or legal system; they were members of households as part of a domestic system. What held the unit together was the central position and dominance of the father or husband, and hence the life of a household was only as long as his lifetime. When he died, the household broke up and the surviving members joined other households, perhaps in the same district, perhaps in some other band territory. Such change of household was carried out by the individuals concerned, not quite at will, but certainly not with sufficient uniformity for any political or legal label to be put upon it.

Uniformity was derived from the fact that every Tiwi had to live in a household. The universal prohibition on unmarried females was obviously one expression of that requirement. For men, the requirement was less firm, and if a young man wanted to live entirely alone he was free to try—although there is no record of any man having tried it for more than a few weeks at a time. Even if his mother were dead and his father or step-father did not welcome him, he attached himself to some household since, apart from any question of loneliness, this was the only way by which he could eat regularly. For Tiwi households were primarily autonomous food-producing and food-consumption units. A household made its own decisions, camped where it saw fit to camp, moved on when the food quest made it advantageous or necessary to move on. A large household, such as that of Ki-in-kumi or any other big man, was a complete community in itself, with the old man as executive director. He laid down the daily, weekly, and monthly work and travel schedules for the women, the young men, and the children. Most of the time the work went automatically because all the adults and the older children knew their jobs.

Daily Activities

By shortly after dawn each day, the household was up, and after a light breakfast, usually of leftovers from the previous night, everybody left camp to go to work. The women and children (except perhaps the five- to ten-year-old boys, who were rather useless at that age) scattered in every direction from the camp with baskets and/or babies on their backs, to spend the day gathering food, chiefly vegetable foods, grubs, worms, and anything else edible. Since they had spent their lives doing it, the old women knew all about gathering and preparing vegetable foods, and they supervised the younger women. This was one important reason for men marrying widows, and even a man with many young wives was quite likely to remarry an elderly widow or two nonetheless. A husband with only young wives might have a satisfactory sex life, but he still needed a household manager if he wished to eat well. The supervision of the female members of the household was left to the old women and, provided the returns were good, the husband did not attempt to interfere nor to give orders concerning the details of women's work.

After the women had scattered out in a wide circuit from the camp, the husband might hunt, but only if he were not too old. In hunting kanga-

in the party who carried only ordinary ones. The painted spears were symbols of wealth and status and roughly corresponded to white tie and tails in our culture. No important man could afford not to have them, even though for most of the year they were unused. Before leaving home on a journey, it was often necessary for a man to renew the paint on his spears, for it rubbed off easily. Since paint was an aspect of ritual, its use, even the renewal of old paint, was senior men's prerogative; women were not supposed to touch it.[8] The analogy with formal dress even extended to the borrowing of ceremonial spears. An important man, caught short of them, might borrow some from a contemporary who had plenty, and though everybody would know that his spears were borrowed, he at least was properly dressed for the occasion, though stark naked otherwise.

Baskets made of bark with gummed sides were made by the women, but the painted designs upon these baskets were applied by the men, in line with their monopoly on all work that required paint. These baskets of various sizes but little variation in shape were used for all domestic tasks involving the collection, storing, transporting, and preparing of vegetable foods, and were sufficiently watertight to enable water also to be carried in them. Ordinary wooden spears (without barbs or painted designs) and a great variety of throwing sticks were made by all men, young or old, but important old men bothered with them very little, considering such routine manufacture beneath them. These workaday spears and throwing sticks lay around every camp in abundance, and a man who needed spears or sticks in a hurry could always gather up a bundle in a few minutes. Small boys picked up the techniques of making spears and throwing sticks by spending time with older boys who in turn improved their skill both in making and using hunting weapons by spending time with the local young men.

Although much of this learning was fairly random, other instruction was not. During his initiation period a youth spent long intervals isolated in the bush with a couple of older teachers from whom he received training in religious and ritual matters. At the same time, of course, it was inevitable that the novice absorb some of the older men's experience in bushcraft. There was no corresponding initiation period for girls. What they learned, they learned first from the older women of their childhood household and later from the older women of the husband's household into which they moved as child-brides after puberty. In all households the supervision by the elderly women of all younger women included the training of both female children and young wives in the things all females should know—things which were mostly concerned with collecting and preparing vegetable foods and the making of baskets.

In pre-white times Tiwi males wore no clothing whatever. The Mission insisted on calico loincloths, but, at least in the 1928-29 period, one could

[8] Female mourners were required to daub their bodies with white clay as a sign of mourning, but this paint was smeared haphazardly over their bodies and faces without any attempt at regularity or design, in contrast to the careful paint designs on the men's bodies.

BATHURST ISLAND ABORIGINAL MOTHER AND CHILD.

600 crocodile, nothing that breathes so utterly immobile; but there are few beasts that can spring more quickly into deadly activity when the occasion warrants a display of strength and agility.

The Vernons do not appear to be the sort of emergency landing-ground that one would choose if it could possibly be avoided. Apart from the crocodiles, the terrain does not promise too safe a landing.

Sea and sky alike were palest blue, and, in the farthest distance, the vast and faintly-wrinkled expanse of ocean mingled softly with the sky in a pearly sea-haze. One could not say where the one began and the other ended, and, partly obscured in the haze, far-distant luggers, with all sail set, headed for Darwin. Beneath the 'plane, rounded boiling swirls, long straight lines of white foam, and darker turbulent streaks in the pale-blue surface of the sea clearly defined the spring-tide currents. Down beneath us, too, shoals and deeps showed emerald or blue, and the long, pale-brown lines of reef that run
